## DRAFT FINDING OF NO SIGNIFICANT IMPACT

## PROGRAMMATIC ENVIRONMENTAL ASSESSMENT FOR NATURAL RESOURCES MANAGEMENT COMPLIANCE AT ARMY MATERIEL COMMAND INSTALLATIONS

- 4 1. PROPOSED ACTION: The Proposed Action and subject of this Programmatic Environmental
- 5 Assessment (PEA), which is hereby incorporated by reference, is the implementation of supplementary
- 6 natural resources management plans on Army Materiel Command (AMC) installations. Implementing the
- 7 Proposed Action would ensure that natural resources management activities on AMC installations comply
- 8 with a common set of federal, U.S. Department of Defense (DoD), and Army laws, regulations, and
- 9 guidance documents.

1

2

- 10 2. PURPOSE OF THE PEA: Use of the PEA by AMC installations ensures their compliance with
- 11 applicable natural resources planning DoD Directives and Instructions, Army Regulation 200-1
- 12 (Environmental Protection and Enhancement), and the Sikes Act (Title 16 of the United States Code 670
- et seq.). Use of the PEA reduces the time and cost burden on the installations of preparing a separate
- 14 National Environmental Policy Act (NEPA) document for each natural resources plan, which have
- 15 historically resulted in a Finding of No Significant Impact. The PEA accomplishes this by using a checklist
- to determine whether a new or updated natural resources planning document might have a significant
- 17 adverse environmental impact. Those plans for which no significant adverse effect is foreseen can use a
- 18 Record of Environmental Consideration to complete their NEPA requirement. The installations bear the
- 19 burden of preparing an Environmental Assessment or Environmental Impact Statement (EIS) only for
- 20 those plans for which a significant adverse environmental impact is foreseen.
- 21 **3. ALTERNATIVES CONSIDERED:** The PEA considered the Preferred Alternative and the No
- 22 Action Alternative. The No Action Alternative was to conduct a separate NEPA analysis for each
- 23 supplementary natural resources management plan required at each AMC installation. The No Action
- 24 Alternative was found to be reasonable but would be more costly and require additional staff time to
- 25 achieve the same result. Both the Preferred Alternative and the No Action Alternative are evaluated in
- the PEA. The PEA characterizes the likely environmental impacts, including impacts on human health,
- that could result from implementing the Preferred Alternative and the No Action Alternative.
- 28 4. ENVIRONMENTAL CONSEQUENCES AND MITIGATION MEASURES: It is unlikely that
- 29 significant adverse environmental impacts will result from implementing the Preferred Alternative. The
- 30 Preferred Alternative includes adherence to applicable existing health, safety, and environmental
- 31 regulations. Implementing standard best management practices for natural resources and human health
- 32 protection during implementation of supplementary natural resources management plans will ensure
- 33 environmental protection and mitigate risks to people.
  - 5. FACTORS CONSIDERED IN THE FINDING OF NO SIGNIFICANT IMPACT: The PEA
  - discusses the nature of the Preferred Alternative and the likely environmental effects, including
- cumulative effects, on all relevant resource areas associated with its implementation.
- 37 **6. CONCLUSIONS:** Based on the analysis, the Preferred Alternative would have no significant
- 38 adverse effects on the natural or human environment. Preparation of an EIS is not required.
- 39 Implementing the No Action Alternative also would have no significant adverse effects on the natural or
- 40 human environment but would require additional staff time and budget to accomplish while achieving the
- 41 same result.
